AHSANULLAH UNIVERSITY OF SCIENCE AND TECHNOLOGY

Project name   : Supershop Management System

Group name   : Team NSA

Department   : Computer Science and Engineering

Section   : C2

Semester   : Spring 2020

Year   : Second

Group Members :

Name	ID
Md. Ashab Mohiuddin	19.01.04.128
Md. Ali Akber	19.01.04.129
Nafiza Tabassoum Shejuti	19.01.04.136

Description   : This a Database management System project. Basically it can manage the whole system of a supershop. By using our project system we can keep track on the import items, export items and remaining items. We can also calculate the financial profit or loss of the supershop.

Requirement   :

      Language : Java

      Library   : JavaFx

      IDE   : NetBeans

Features   : In this Database Management System only admin and employees can login with their respective accounts and password. The admin have the full access of this application. He/ She can go any page of this application if he/she wants. On the other hand though the employees can login to this application they have some restrictions too. Such as an employee can't access the page of profit/loss or employee information. Thus this application can manage the whole database system of a supershop.
